

RotaCol® - Diamondline
 'SSI' Interface Precision Contactless Rotary Position Sensors
 Clamping Flange - 2 Precision Ball Bearings

50Y DRCW

Servomount case - 2 Ball bearings
Hall effect magnetic
50 mm Ø robust metal aluminium housing with 2 ball bearings
Direct serial synchronous interface for direct input to PLC etc.
Clamping flange with 3 screws.
Measurement range 0° - 360°

1. Supply(Red); 2. Ground(Black); 3.Clock +ve(Orange); 4.Clock -ve(Brown); 5.Data +ve(Green); 6.Data -ve(Yellow) : For OCR

ELECTRICAL CHARACTERISTICS

Electrical angle	0 - 360°	
Electrical speed (Max.)	1600 rpm	
Resolution	12 bit (4096 steps)	
Signal	Supply voltage	Output signal
S05SSI	5V±10%	5V SSI
S24SSI	9-30V DC	24V SSI
Frequency response	10 KHz	
Supply current	< 30 mA	
Update rate	0.1 ms	

MECHANICAL CHARACTERISTICS

Mechanical angle	360° (continuous)
Shaft diameter X length (FMS)	8 mm Ø X 22 mm
Protection	IP 54
Operating torque	0.05 Ncm
Operating temperature	- 40 to +85° C
Operating life	~ 75 million rotations
Mechanical speed (max.)	5000 rpm
Weight	250 gm
Interconnection	6 core round cable 2.5 mtr long

MATERIAL

Housing	Anodized aluminium
Shaft	Stainless steel
Bearings	2 precision ball bearing

For full range of Rotary Sensor refer -

FUNCTION PRINCIPLE

The angular position and the signal generation is detected by a CMOS Hall sensor over which a parallel diametrically polarized magnet induces a magnetic field. An integrated electronic provides the output of a 2 byte WORD in Grey-code for SSI interface.

SERIAL SYNCHRONOUS INTERFACE

With the SSI interface the absolute angular position is provided serially and synchronous to a receiving electronic which has an SSI input (PLC indicator etc). The main advantage of the SSI interface is that long cable distances can be overcome by very few data lines. The actual angle of position is provided in 2 byte WORD Grey code with 12 bit over 360°. The receiving electronic provides pulse sequences and thus determines the transmission rate. With the first following signal of the pulse sequence, the angular position is detected and kept. The following rising ramps control the bit- wise transmission of the data word. After a small pause a new angular value can be transmitted.

Default Version :

50 mm housing, clamping flange, 2 ball bearing ,360°
 Electrical & Mechanical angle CW, 6 core round cable 2.5 mtr long

ORDERING INFORMATION

Refer to electrical and mechanical options on page 2

Housing diameter	Serial Synchronous Interface (SSI)	Diamondline	RotaCol	Clamping flange with 3 screws	Signal	12 bit output	Without stop (default 360°)	Direction of rotation	Clockwise- (default) Counter clockwise	Programming options	Zero point	Output connections
50	Y	D	RC	W	S05SSI S24SSI	S12	O360		CW CCW	POZ		OCR
50	Y	D	RC	W	SxxSSI	S12	O360		CW/CCW	POZ		OCR

Example with description **50Y DRCW S24SSI S12 O360 CCW POZ OCR**- 50mm diameter, SSI output, Diamondline, RotaCol, Clamping flange with 3 screws, Signal - 24V SSI, 12 bit output, without stop 360° Counter clockwise direction, Zero point, 6 Core round cable 2.5 mtr long

Please note: The specification and information in this datasheet cannot consider all special demands that are caused by the application. Because of this, they are no general description of the properties of the product. Megacraft does not assume any responsibility for damages due to improper application of our products. The user has to ensure on his own, that the products used are suitable for his application. Megacraft does not warrant the reproducibility of published information. The specifications can be changed any time without notice.

ELECTRICAL OPTIONS FOR SSI VERSION 50Y DRCW

RotaCol® are the latest development in rotational position sensors and contactless devices. Modern Hall IC's in combination with special magnets and RISC processors provide intelligent customizing of putput signals and interfacing. Not only precision potentiometer but also optoelectronic incremental and absolute encoders are replaced. The RotaCol® series is divided into 3 groups : analog types with analog output (replacement for precision potentiometer), incremental output (replacement of optoelectronic encoders), absolute digital SPI and SSI output. Because of wide variety of mechanical and electrical options it is possible to use them in almost any automation and control application where rotary angular sensing is required. Regardless of the wide variety of existing technical features, the price is relative low.

SSI - Serial Synchronous Interface is wide spread in industrial applications with absolute angle sensors. There are a lot of programmable logic controls (PLC) or other peripheral appliances like counters available that can be easily configured for this communication. Furthermore this interface is very insensitive against electromagnetic interferences because of the differential signals that should be transmitted via twisted pair leads.

Direction of Rotation (CW / CCW)

The standard configuration of rotation is clockwise (CW). It is also possible to change the direction of turning to counter clockwise mode (CCW) (Price Adder).

Zero Point Programming (POZ)

Standard configuration is zero point without orientation. The electrical zero point is at the beginning of the signal rise. If a shaft marking is brought in line with the housing marking, the electrical zero point can be set to that position (Price Adder).

INTERCONNECTIONS

Standard Interconnections - 6 Core round cable - 2.5 mtr long radial
